

# Code challenge documentation -revision 1

1. The completed code challenge is uploaded to my GitHub repository (<https://github.com/loannisDogas/Projects.git>) in a folder named "tfs\_cd\_revision1"
2. In order to view the end result double click on the folder "tfs\_cd\_revision1", on the file "tfsCodeChallenge\_revision1.html" right click "Copy link address" and paste the URL to <https://htmlpreview.github.io>

**Notice:** Corrected the required snippet (implemented as JSON file ("banner.json") after permission was granted by the evaluating developer, to be able to present the countdown of an offer, in the banner and the time that expires (with the banner removed) as required.

In order to properly configure the countdown the "schedule=>to" property should be compared to browser time.

Because in the original snippet the countdown period was at minimum some days in duration. I took the initiative to add the days in the countdown (DD HH:MM:SS).

Displaying only the required HH:MM:SS format would be misinformative for the user in a real case scenario.
